HEGEMONY

◆ James Lull

Hegemony is the power or dominance that one social group holds over others. This can refer to the “asymmetrical interdependence” of political-economic-cultural relations between and among nation-states (Straubhaar, 1991) or differences between and among social classes within a nation. Hegemony is “dominance and subordination in the field of relations structured by power” (Hall, 1985). But hegemony is more than social power itself; it is a method for gaining and maintaining power.

Classical Marxist theory, of course, stresses economic position as the strongest predictor of social differences. Today, more than a century after Karl Marx and Friedrich Engels wrote their treatises about capitalist exploitation of the working class, economic disparities still underlie and help reproduce social inequalities in industrialized societies. In that important, basic sense, Marxism and Marxist critical theory, which have been so badly maligned in the rhetoric surrounding the recent political transformation of communist nations, remain fundamentally on target. Technological developments in the twentieth century, however, have made the manner of social domination much more complex than before. Social class differences in today’s world are not determined solely or directly by economic factors. Ideological influence is crucial now in the exercise of social power.

NOTE: From *Media, Communication, Culture: A Global Approach*, by James Lull, 1995, New York and Chichester, UK: Columbia University Press. Copyright 1995 by James Lull. Reprinted with permission.

The Italian intellectual Antonio Gramsci—to whom the term hegemony is attributed—broadened materialist Marxist theory into the realm of ideology. Persecuted by his country's then fascist government (and writing from prison), Gramsci emphasized society's "super structure," its ideology-producing institutions, in struggles over meaning and power (1971, 1973, 1978; see also Boggs, 1976; Sassoon, 1980; and Simon, 1982). A shift in critical theory thus was made away from a preoccupation with capitalist society's "base" (its economic foundation) and towards its dominant dispensaries of ideas. Attention was given to the structuring of authority and dependence in symbolic environments that correspond to, but are not the same as, economically determined class-based structures and processes of industrial production. Such a theoretical turn seems a natural and necessary development in an era when communications technology is such a pervasive and potent ideological medium. According to Gramsci's theory of ideological hegemony, mass media are tools that ruling elites use to "perpetuate their power, wealth, and status [by popularizing] their own philosophy, culture and morality" (Boggs, 1976: 39). The mass media uniquely "introduce elements into individual consciousness that would not otherwise appear there, but will not be rejected by consciousness because they are so commonly shared in the cultural community" (Nordenstreng, 1977: 276). Owners and managers of media industries can produce and reproduce the content, inflections, and tones of ideas favorable to them far more easily than other social groups because they manage key socializing institutions, thereby guaranteeing that their points of view are constantly and attractively cast into the public arena.

Mass-mediated ideologies are corroborated and strengthened by an interlocking system of efficacious information-distributing agencies and taken-for-granted social practices that permeate every aspect social and

cultural reality. Messages supportive of the status quo emanating from schools, businesses, political organizations, trade unions, religious groups, the military, and the mass media all dovetail together ideologically. This inter-articulating, mutually reinforcing process of ideological influence is the essence of hegemony. Society's most entrenched and powerful institutions—which all depend in one way or another on the same sources for economic support—fundamentally agree with each other ideologically.

Hegemony is not a *direct* stimulation of thought or action, but, according to Stuart Hall, is a "framing [of] all competing definitions of reality within [the dominant class's] range, bringing all alternatives within their horizons of thought. [The dominant class] sets the limits—mental and structural—within which subordinate classes 'live' and make sense of their subordination in such a way as to sustain the dominance of those ruling over them" (1977: 333). British social theorist Philip Elliott suggested similarly that the most potent effect of mass media is how they subtly influence their audiences to perceive social roles and routine personal activities. The controlling economic forces in society use the mass media to provide a "rhetoric [through] which these [concepts] are labeled, evaluated, and explained" (1974: 262). Television commercials, for example, encourage audiences to think of themselves as "markets rather than as a public, as consumers rather than citizens" (Gitlin, 1979: 255).

But hegemony does not mature strictly from ideological articulation. Dominant ideological streams must be subsequently reproduced in the activities of our most basic social units—families, workplace networks, and friendship groups in the many sites and undertakings of everyday life. Gramsci's theory of hegemony, therefore, connects ideological representation to culture. Hegemony requires that ideological assertions become self-evident cultural

assumptions. Its effectiveness depends on subordinated peoples accepting the dominant ideology as "normal reality or common sense . . . in active forms of experience and consciousness" (Williams, 1976: 145). Because information and entertainment technology is so thoroughly integrated into the everyday realities of modern societies, mass media's social influence is not always recognized, discussed, or criticized, particularly in societies where the overall standard of living is relatively high. Hegemony, therefore, can easily go undetected (Bausinger, 1984).

Hegemony implies a willing agreement by people to be governed by principles, rules, and laws they believe operate in their best interests, even though in actual practice they may not. Social consent can be a more effective means of control than coercion or force. Again, Raymond Williams: "The idea of hegemony, in its wide sense, is . . . especially important in societies [where] electoral politics and public opinion are significant factors, and in which social practice is seen to depend on consent to certain dominant ideas which in fact express the needs of a dominant class" (1976: 145). Thus, in the words of Colombian communication theorist Jesús Martín-Barbero, "one class exercises hegemony to the extent that the dominating class has interests which the subaltern classes recognize as being in some degree their interests too" (1993: 74).

Relationships between and among the major information-diffusing, socializing agencies of a society and the interacting, cumulative, socially accepted ideological orientations they create and sustain is the essence of hegemony. The American television industry, for instance, connects with other large industries, especially advertising companies but also national and multinational corporations that produce, distribute, and market a wide range of commodities. So, for example, commercial TV networks no longer buy original children's television shows. Network executives only want new

program ideas associated with successful retail products already marketed to children. By late 1990 more than 20 toy-based TV shows appeared on American commercial TV weekly. Television also has the ability to absorb other major social institutions—organized religion, for instance—and turn them into popular culture. The TV industry also connects with government institutions, including especially the federal agencies that are supposed to regulate telecommunications. The development of American commercial broadcasting is a vivid example of how capitalist economic forces assert their power. Evacuation of the legislatively mandated public service ideal could only have taken place because the Federal Communications Commission stepped aside while commercial interests amassed power and expanded their influence. Symptomatic of the problem is the fact that government regulators typically are recruited from, and return to, the very industries they are supposed to monitor.

Transmedia and transgenre integrations with mutually reinforcing ideological consequences are also commonplace. Popular radio and video songs, for example, can also be commercials. . . . Commercial logos become products themselves and are reproduced on tee-shirts, posters, beach towels, and other informal media. The rhetoric of TV commercials and programs is recycled in the lyrics of rap music and in the routines of stand-up comedians performing live and on television. . . . There are films made for television, magazines published about television, and television news magazines. The most well-known national newspaper in the United States, *USA Today*, is sold nationwide in vending boxes that resemble TV sets. Television commercials appear on Channel One, an educational news channel shown to students in American elementary school classrooms. Logos that advertise only national gasoline, food, and motel chains appear on government highway signs, advising travelers of their availability at

upcoming freeway exits. Expensive public relations campaigns of major corporations distribute "informational" supplementary textbooks to elementary and secondary school systems. Major business organizations send digests of their annual reports and other promotional materials to college instructors, hoping this biased information will be incorporated into teaching and research. Similar materials are sent to political and religious leaders so they will pass the information along to their constituencies and congregations.

In the United States, advocacy of alternative political ideologies, parties, and candidates, or suggestions of viable consumer alternatives to the commercial frenzy stimulated and reinforced by advertising and other marketing techniques, are rarely seen on the popular media. Radical ideas typically appear only on underfinanced, non-commercial radio and TV stations and in low-budget print media. These media have tiny public followings compared to commercial television and video outlets, metropolitan daily newspapers, and national magazines. When genuinely divergent views appear on mainstream media, the information is frequently shown in an unfavorable light or is modified and co-opted to surrender to the embrace of mainstream thought. . . . The mass media help create an impression that even society's roughest edges ultimately must conform to the conventional contours of dominant ideologies.

Hegemony has been central to the management of ideology in communist nations too, though it develops differently. Central ideological planning and the creation of propaganda to advise "the people" represent the same intention—to protect the interests of ruling elites. . . .

The collapse of political authority in Eastern and Central Europe and the former Soviet Union was a breakdown in communist ideological hegemony. Conflict between culture producers and young audiences in East Germany and Hungary is

typical of what happened in the Soviet bloc (Wicke, 1992; Szemere, 1985). Young rock musicians and their enthusiastic audiences led a cultural and political struggle against the repressive institutions and the ideology behind them. Trying to contain and control rebellious youth, the former communist governments attempted in sinister ways to defuse the politically charged musical and cultural activity of youth by incorporating and sponsoring them. Young people and other dissenters saw through the strategy, however, challenged the hegemony, and stimulated policy changes that later contributed to the dramatic downfall of the European communist governments. In China, the extraordinary student and worker uprising in 1989 is but the most visible sign of widespread resistance among that country's disaffected urban population.¹ Recent popular revolutions in communist countries developed from widespread discontent with an interacting spectrum of economic, political, and cultural conditions. Ironically, the workers' uprising that Marx and Engels theorized would take place in repressive, class-based capitalist economies developed instead in communist nations which had proven in many respects to be even more repressive.

Hegemony as an Incomplete Process ♦

Two of our leading critical theorists, Raymond Williams and Stuart Hall, remind us that hegemony in any political context is indeed fragile. It requires renewal and modification through the assertion and reassertion of power. Hall suggests that "it is crucial to the concept that hegemony is not a 'given' and permanent state of affairs, but it has to be actively won and secured; it can also be lost" (1977: 333). Ideological work is the winning and securing of

hegemony over time. . . . Ideology is composed of "texts that are not closed" according to Hall, who also notes that ideological "counter-tendencies" regularly appear in the seams and cracks of dominant forms (Hall, 1985). Mediated communications ranging from popular television shows to rap and rock music, even graffiti scrawled over surfaces of public spaces, all inscribe messages that challenge central political positions and cultural assumptions.

Counter-hegemonic tendencies do not inhere solely in texts. They are formulated in processes of communication—in the interpretations, social circulation, and uses of media content. As with the American soldiers' use of military gas masks as inhaling devices to heighten the effect of marijuana smoke, or the homeless's transformation of supermarket shopping carts into personal storage vehicles, ideological resistance and appropriation frequently involve reinventing institutional messages for purposes that differ greatly from their creators' intentions. Expressions of the dominant ideology are sometimes reformulated to assert alternative, often completely resistant or contradictory messages. . . .

Furthermore, resistance to hegemony is not initiated solely by media consumers. Texts themselves are implicated. Ideology can never be stated purely and simply. Ways of thinking are always reflexive and embedded in a complex, sometimes contradictory, ideological regress. . . .

Audience interpretations and uses of media imagery also eat away at hegemony. Hegemony fails when dominant ideology is weaker than social resistance. Gay subcultures, feminist organizations, environmental groups, radical political parties, music-based formations such as punks, B-boys, Rastafarians, and metal heads all use media and their social networks to endorse counter-hegemonic values and lifestyles. Indeed, we have only just begun to examine the complex relationship between ideological representation and social action.

Note ♦

1. It's important to realize that the military suppression of the student-worker uprising in Beijing in 1989 did not stop the Chinese revolutionary movement. It made possible the dramatic and far-reaching (if less visually spectacular) economic and cultural changes that characterize the People's Republic today.
